

WIRELESS MOBILITY

Per a 2012 Gartner study on BYOD and the Enterprise Client...

- 90 percent of all the organizations surveyed have already deployed mobile devices on their enterprise wireless networks. The most common mobile device deployed being smart phones.
- 86 percent of the participating enterprises are planning to deploy tablets this year.
- 32 percent of those surveyed say that they service personal smart phones used in the work environment.
- 37 percent of respondents said that they also service personal tablets brought in on the enterprise wireless network.
- 44 percent of organizations say they will offer technical support on personal laptops that employees bring into work.

WIRELESS MOBILITY SOLUTIONS

The mobilization of enterprise applications are increasing at a fast pace. The world as we know it is becoming more and more mobile and businesses are forced to deal with BYOD (bring your own device) in the workplace. Cloud technologies and advances in wireless devices have enabled that trend even further and are making mainstream access to critical applications "from anywhere in the world" very appealing. Such growth in wireless mobility has forced companies to re-look at their mobile policies, mobile security, mobile management, and cost of such services. MasterTel USA works with the leading solution providers and helps clients address these

Concerns by offering solutions in the following key areas:
